

# CD68 (Macrophage Marker) Antibody

Mouse Monoclonal Antibody [Clone C68/2501]

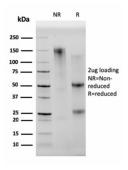

Catalog No	Format	Size
968-MSM7-P0	Purified Ab with BSA and Azide at 200ug/ml	20 ug
968-MSM7-P1	Purified Ab with BSA and Azide at 200ug/ml	100 ug
968-MSM7-P1ABX	Purified Ab WITHOUT BSA and Azide at 1.0mg/ml	100 ug

Applications	Tested Dillution	Note
Immunohistochemistry (IHC)	1-2ug/ml	30 min at RT. Staining of formalin-fixed tissues requires heating tissue sections in 10mM Tris with 1mM EDTA, pH 9.0, for 45 min at 95°C followed by cooling at RT for 20 minutes

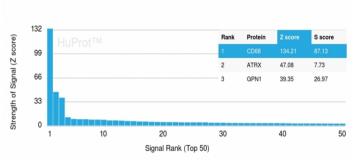

C68/2501	
CD68	
Recombinant fragment of humanCD68 protein (around aa 150-221) (exact sequence is proprietary)	
Mouse	
Monoclonal	
IgG2c / Kappa	
110kDa	
Cell membrane, Endosome membrane, Lysosome membrane	
Human	
lymph node or spleen., Tonsil	

<sup>\*</sup>Optimal dilution for a specific application should be determined.

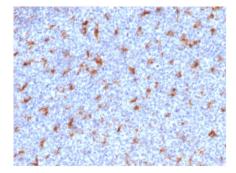

## Product Images for CD68 (Macrophage Marker) Antibody

SDS-PAGE Analysis of Purified CD68 Mouse Monoclonal Antibody (C68/2501). Confirmation of Integrity and Purity of Antibody.

Analysis of Protein Array containing >19,000 full-length human proteins using CD68 Mouse Monoclonal Antibody (C68/2501) Z- and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (Monoclonal Antibody) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProtTM array. Z-scores are described in units of standard deviations (SD,Äôs) above the mean value of all signals generated on that array. If targets on HuProtTM are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD,Äôs) between the Z-score. S-score therefore represents the relative target specificity of a Monoclonal Antibody to its intended target. A Monoclonal Antibody is considered to specific to its intended target, if the Monoclonal Antibody has an S-score of at least 2.5. For example, if a Monoclonal Antibody binds to protein X with a Z-score of 43 and to protein Y with a Z-score of 14, then the S-score for the binding of that Monoclonal Antibody to protein X is equal to 29.

Formalin-fixed, paraffin-embedded human Tonsil stained with CD68 Mouse Monoclonal Antibody (C68/2501).

#### **Specificity & Comments**

This antibody recognizes a glycoprotein of 110kDa, which is identified as CD68. It is important for identifying macrophages in tissue sections. It stains macrophages in a wide variety of human tissues, including Kupffer cells and macrophages in the red pulp of the spleen, in lamina propria of the gut, in lung alveoli, and in bone marrow. It reacts with myeloid precursors and peripheral blood granulocytes. It also reacts with plasmacytoid T cells, which are supposed to be of monocyte/macrophage origin. It shows strong granular cytoplasmic staining of chronic and acute myeloid leukemia and also reacts with rare cases of true histiocytic neoplasia. Lymphomas are negative or show few granules.

#### **Supplied As**

200ug/ml of Ab Purified from Bioreactor Concentrate by Protein A/G. Prepared in 10mM PBS with0.05% BSA & 0.05% azide. Also available WITHOUT BSA & azide at 1.0mg/ml.

### **Storage and Stability**

Antibody with azide - store at 2 to  $8^{\circ}$ C. Antibody without azide - store at -20 to -80°C. Antibody is stable for 24 months. Non-hazardous. No MSDS required.

#### **Research Areas**

Hematopoietic Stem Cells, Immunology

#### **Limitations and Warranty**

This antibody is available for research use only and is not approved for use in diagnosis. There are no warranties, expressed or implied, which extend beyond this description. Company is not liable for any personal injury or economic loss resulting from this product.
